INTEGRATED TICKETING ECOSYSTEM

A complete point-of-sales solution – from online ticket booking to offline POS, admin configuration, and customer-facing experiences. All in one seamless ecosystem. Fully **white-labelable** with your brand.

EXPLORE THE PLATFORM

THE COMPLETE POS ECOSYSTEM

Our POS ecosystem integrates every aspect of the customer journey – from booking tickets online to managing back-office configuring admin settings, and delivering a seamless experience to every front-of-house and queue attendant.

Built for entertainment venues and attractions, the platform handles seasonal pricing, promotions, multi-lokasi shift sharing, role-based access control, and real-time queue management – all from a unified system.

4 Platforms Integrated

15+ Years Experience

24/7 Server Support

FOUR PLATFORMS, ONE ECOSYSTEM

WEB ADMIN

Full-featured admin panel for managing tickets, discounts, promotions, reports, user access, and real-time monitoring.

View Features →

WEB CUSTOMER

Customer-facing platform for booking tickets online and checking ticket status. Supports multiple attraction brands, each branded to match their identity.

View Features →

OFFLINE POS

Desktop application for on-site ticket sales – fully operational without internet connection.

View Features →

AUTOMATED GATE

Hardware-integrated automated gate system that validates QR codes and RFID cards for seamless, contactless entry control.

View Features →

WEB ADMIN

The admin panel for configuring the entire POS system — from pricing to user management.

Season Pricing | Promotions | Multi-lokasi | Access Control | Queue Monitor | Dashboard | Roles & Security

SEASON-BASED PRICING

Set dynamic prices for ticket variants based on weekend, or special dates. Full calendar integration for easy operational team governance.

- Calendar view pricing matrix
- Per-lokasi price configuration
- Weekend & special date pricing
- Unlimited price variants per ticket

PROMOTION & DISCOUNTS

Configure promo codes, bundle deals, and time-based discounts to boost sales and attract new customers. Apply to online and offline POS system.

- Percentage-based discount codes
- Bundle deals & combo packages
- Validity period management
- Cross-lokasi promo logic support

FLEXIBLE REPORTING

Comprehensive reporting for operators – revenue per item, cancellations, refunds, cashier logs, reconciliation, and more. Export and filter with ease.

- Revenue per item breakdown
- Cancellation & refund reporting
- Cashier activity logs
- Period-based comparisons
- Export & advanced filtering

ROLE-BASED ACCESS

Granular permission control – Owner, Area Supervisor, Cashier, Gate Operator, and Queue Staff each have only the tools they need to do their job.

- Per-menu permission granularity
- Owner, Cashier, Gate, Queue controls
- Custom role & permission templates
- Multi-company management

TENANT PROFIT SHARING

Manage multi-tenant revenue splits with automated profit share reports. Each tenant gets their own login, reporting, and percentage-based profit split.

- Automatic share reports
- Per-tenant login & dashboard
- Percentage-based profit split
- Independent tenant reporting

BOOKING MANAGEMENT

Full booking lifecycle control – view, edit, cancel, and process booking payment types, visitor info, and invoice trails. Both admin and POS capabilities.

- Order status tracking
- Payment type breakdown
- Visitor info management
- Invoice trail & history
- Admin & POS booking access
- Performance tracking by A/B testing campaign tracking

MOBILE REPORT

Admin manager can check reports directly from your mobile device – anytime, anywhere. View transaction summaries, revenue per item, and daily performance without desktop dashboard.

- Real-time transaction summary
- Revenue per item breakdown
- Web-based reporting
- Mobile-optimized responsive layout
- Accessible from any device
- No app install required

WEB CUSTOMER

The customer-facing platform for booking tickets online and viewing ticket information.

Book Tickets Online | View Ticket Details | QR Tickets | Queue Live UI

BOOK TICKETS ONLINE

Customers can browse available tickets, choose their date, visitor details, choose ticket categories, apply promo codes, and view real-time crowd status before purchasing.

- Real-time ticket calendar
- Promo code support
- Primary order support
- Real-time queue view
- QRIS payment

VIEW TICKET DETAILS

After purchase, customers get a complete ticket dashboard – showing invoice details, purchased attractions, availability status, savings and total, and access tickets for each attraction.

- Purchased attractions list
- Ticket availability status
- Queue status per attraction
- Savings and total display
- Quick access to QR codes

QR CODE TICKETS

Each booking generates QR codes for entry – customers can view ticket details, remaining uses, and usage history per attraction directly from their device.

- Scannable QR code per booking
- Per-attraction usage tracking
- Ticket-based freemium access
- Reward item tracking
- Real-time entry support

LIVE QUEUE DISPLAY

An ultra-queue display system shows the current queue number alongside attraction name. Customers can track their position and get ready accordingly – reducing crowding and queue frustration.

- Real-time queue number display
- Attraction-specific queues
- Auto-cycling display support
- Event management support

OFFLINE MODE POS

Desktop application for on-site ticket sales – fully operational without internet connection.

Item Configuration & Sales | Calendar Schedule View | Sales Transaction Recap | Top Up Existing Ticket

ITEM CONFIGURATION & SALES

The POS interface is designed for speed – operators can find tools for walk-in, quick ticket search, customer info capture, VIP category support, and instant process from hyperlinkless.

- Keyboard-shortcut driven UI
- Walk-in ticket processing
- Real-time availability check
- VIP code support
- Offline-first operation

CALENDAR SCHEDULE VIEW

View and manage schedule/availability through an intuitive calendar interface. See operating hours/status, plan capacity, and manage time slots – all integrated into the POS workflow.

- Monthly calendar view icon
- Time slot management
- Slots capacity vs. booked
- Integrated with POS flow

SALES TRANSACTION RECAP

Cashier shift end, view a full recap of their session's activity. Check opening/closing cash, total sales by payment type, item quantities, and handle cash withdrawals with supervisor authorization.

- Cash opening/closing reporting
- Payment by payment method
- Item quantity breakdown
- Cash withdrawal with auth
- Shift start/end cashier

TOP UP EXISTING TICKET

Add more attractions or items to an existing ticket without creating a new transaction. Scan or search the ticket barcode, view current items and remaining usage, then top up directly from the POS.

- Barcode scan or manual ticket search
- View current & ticket details
- Add attractions with payment options
- Add new items to existing ticket
- Edit ticket code on the fly

AUTOMATED GATE

Hardware-integrated gate system that validates QR codes and RFID cards, using customer tickets – logs admittance to entries.

SEAMLESS ACCESS CONTROL

The gate system integrates directly with the POS ecosystem. When a customer purchases a ticket, their wristband is linked to that booking. At each attraction gate, they simply tap to enter – the system validates the ticket in real-time and controls the physical barrier.

- Wristband tap-to-enter validation
- Real-time ticket verification
- Physical barrier control (open/close)
- Multi-attraction support
- Independent with POS booking system
- No internet required for transactions
